DIGITAL LITERACY

PROJECT REPORT

Name: Gayatri Palodkar
Reg No: 25MIM10096
Branch: Integrated Mtech in AI
Year: 2025-30
Course Code: CSE0001
Date: 29-03-2026

INTRODUCTION :

In the present digital age, online learning, communication and working have become a very important part of students learning, communication, and working. Digital literacy does not merely entail the use of digital tools but it also entails knowing about its consequences, risks, and how the tools should be used responsibly. The proposed project will create awareness and practical skills concerning digital platforms and how to use them effectively.

Working as a Student Digital Ambassador I discovered different tools and platforms that can help to advance in my academic and professional life. This project taught me how to establish a professional online presence, interact, collaborate with the help of online tools and tools and how to remain safe against cyber threats. All assignments taught me the value of responsible online actions and allowed becoming more effective and safe at using technology.

TASK 1 WRITE-UP (150-200 words)

In the first task, I designed a digital literacy awareness infographic using Canva. Among the significant issues discussed in the infographic are the definition of digital literacy, internet safety, and useful digital tools for students. I chose Canva for the infographic as it is easy to work with and contains many templates and elements of design.

To make the infographic easy to learn, simple, and easy to view, the designer made sure to illustrate the key concepts in a clear and concise manner. I have also included information on how to protect personal information, avoid suspicious links, and create a good digital footprint. It was also a goal to raise the awareness of students regarding the need to act responsibly in the digital world.

One of the problems I faced in the assignment was choosing the appropriate content and arranging it in a small area without overloading the infographic. This assignment helped me to be more creative and to be able to present information in an effective manner. In general, it helped me to better understand the ways in which visual communication can be applied to educate others.

TASK 2 WRITE-UP (150-200 words)

For task 2, I created my digital portfolio by joining various digital platforms such as GitHub, LinkedIn, and Researchgate. These digital platforms are popular among students and professionals for sharing their skills and achievements.

For GitHub, I created a profile README that includes my basic details and my learning objectives. In LinkedIn, I updated my educational details and created a professional profile. Using the Researchgate digital platform, I connected with my peers. Each digital platform has its own use: GitHub for coding skills, LinkedIn for professional networking, and Researchgate to share papers, ask and answer questions, and find collaborators. In the future, I intend to use these digital platforms for the next two years to create my portfolio and improve my skills. This task has helped me realize the importance of a professional digital presence and its potential to open more career opportunities in the future.

TASK 3 WRITE-UP (150-200 words)

In Task 3, I looked into the design of coding and teamwork sites. I registered on HackerRank and solved a beginner level coding test. This served to make me know the working of coding platforms and how they can be applied to enhance problem-solving skills.

I also designed a Google Form, which had five questions on digital literacy awareness. The test was administered in multiple choices and short-answer format. I also looked at the answers with the help of Google Sheets and it enabled me to see how data is gathered and processed.

These sites are very helpful in the academic use. Coding systems promote logical thinking and technical abilities whereas Google Forms may be utilized in polls, examinations and gathering of remarks. The activity has given me a hands-on experience and boosted my self-confidence regarding the application of digital tools.

TASK 4 WRITE-UP (100-150 words)

In Task 4, I learned about professional communication and etiquette in emails. There was a mistake I always noticed from students when they were required to communicate in a formal setting, such as when required to send an email to a professor or employer. This mistake was the use of informal language in a formal context.

For example, an email which is not well written will have a bad effect on creating a positive response. Emails which lack a subject line, a salutation, and courteousness may be considered to be unprofessional. To avoid such cases, emails should be concise, appropriate, and well-organized. This assignment taught me about the etiquette of professional emails and appropriate communication. I also learned about the power of professional communication to build better relationships and achieve better academic and professional opportunities.

TASK 5 WRITE-UP (100-150 words)

While working on the cybercrime case study, it has been observed that people are easily fooled into phishing attacks even though they are aware of these attacks. Urgency and the message's realism are often used by cyber criminals to lure users into providing sensitive information.

I have learned that it is not enough to simply have knowledge in your head. You have to use your knowledge in real-life situations. One behavior that I have learned to change is to check the email or link before clicking on it. In addition, I have learned not to share sensitive information unless I have confirmed the source.

The assignment has made me even more aware of the cyber threats that exist and the importance of being vigilant when using digital platforms.

CONCLUSION (100 words)

Through this project, I was able to comprehend the significance of digital literacy in daily life. I was able to learn how to use technology appropriately, build a professional online presence, communicate appropriately, and protect myself from cyber threats.

Each task was a step towards building my knowledge and skills. I am now more confident about using technology appropriately. I am more aware of the consequences of my actions. This project has encouraged me to be a responsible digital citizen.

REFERENCES

In order to finish your Digital Literacy Portfolio, the following is the list of used tools, platforms, and resources that were employed in performing the five tasks as per the project brief:

Designing Presentation tools (Task 1)

- Canva: This application was used to create the infographic on professional awareness.

Professional Products and Social sites (Task 2)

- GitHub: The repository of the project was hosted there and a professional profile README was created.
- LinkedIn: It is used to establish an academic network and a professional one.
- Researchgate: ResearchGate is a commercial social networking site for scientists and researchers to share papers, ask and answer questions, and find collaborators.

Technical/ Collaboration tools (Task 3)

- HackerRank: Web site of practice and challenge Python coding issues.
- Google Form: The tool that was utilized to create the Digital Literacy Awareness Quiz, as well as to gather the data.

Communication and Research (Task 4 and 5)

- National Cyber Crime Portal (cybercrime.gov.in): was used as a source of information about the reporting and safety measures.
- Cyber Crime Helpline (1930): The official 24x7 emergency contact in the case of financial fraud.
